

# BAUM *Connect*™

The ability to provide increased productivity does not stop with the advanced mechanical and digital features found on the new BAUM *ifold* and BAUM *AutoSet* folder designs. BAUM strives to bring state of the art technology to the bindery and finishing process using our latest innovations.

*BAUMConnect* is a unique software package now available for installation on BAUM folders equipped with either BAUM *ifold* or BAUM *AutoSet*. *BAUMConnect* enables JDF job files to be sent digitally to the BAUM *ifold* and or BAUM *AutoSet* computer on the BAUM folder. This unique and advanced system provides connectivity needed when using JDF (Job Definition Format) This will enable a remote computer to download JDF files on jobs directly to the folding machines and automatically provide folder settings. All interaction is through a friendly Graphical User Interface that gathers data in terms that graphic arts production staff will immediately understand.

*BAUMConnect* enables BAUM *ifold* to receive JDF files. BAUM *ifold* is the new operator tutorial on a touch-screen computer mounted to the BAUM folder. *ifold* provides information that greatly simplifies manual setup of new BAUM folder models that are not equipped with automation. The addition of *BAUMConnect* to *ifold* allows the operator to access JDF job data which informs them how to setup and run the given job. Imagine simply walking up to the folder and selecting a job that was sent to the folder with all of the information needed. Combine this new advancement with the on-screen tutorial of the *ifold* and you have made folder setup much easier.

*BAUMConnect* enables a JDF file to be sent to the BAUM *AutoSet* computer. *AutoSet* is the automated design for BAUM floor model folders that sets up the automated areas of the BAUM folder. *AutoSet* incorporates all of the features of *ifold* and adds automation for setup. The operator can simply access the job and press the selection key to have the servomotors setup the BAUM folder. JDF data transferred to the BAUM *AutoSet* contains the folder settings.

*BAUMConnect* is compatible with all BAUM *ifold* and *AutoSet* models.

BAUM is preparing the way for the future of folding in the bindery with these new advancements. We keep building on our (90) years of experience in folder design.
