

Think you can't control what your clients send you? *Think again.*

Give them the only tool that builds custom digital templates for folded materials. FOLDRite™ Template Master uses industry-approved folding algorithms and document creation technology that saves countless hours and fees associated with building comps, calculating folding compensation, fixing errors, and recreating bad files. Take it a step further by branding and customizing the software to suit the capabilities of your operation.

We'll make it so that clients will be unable to build anything that you can't produce, while feeling as though they have more variety and flexibility than ever before. You can even preload presets of certain folding styles to guide clients to sizes and formats that run most efficiently on your equipment.

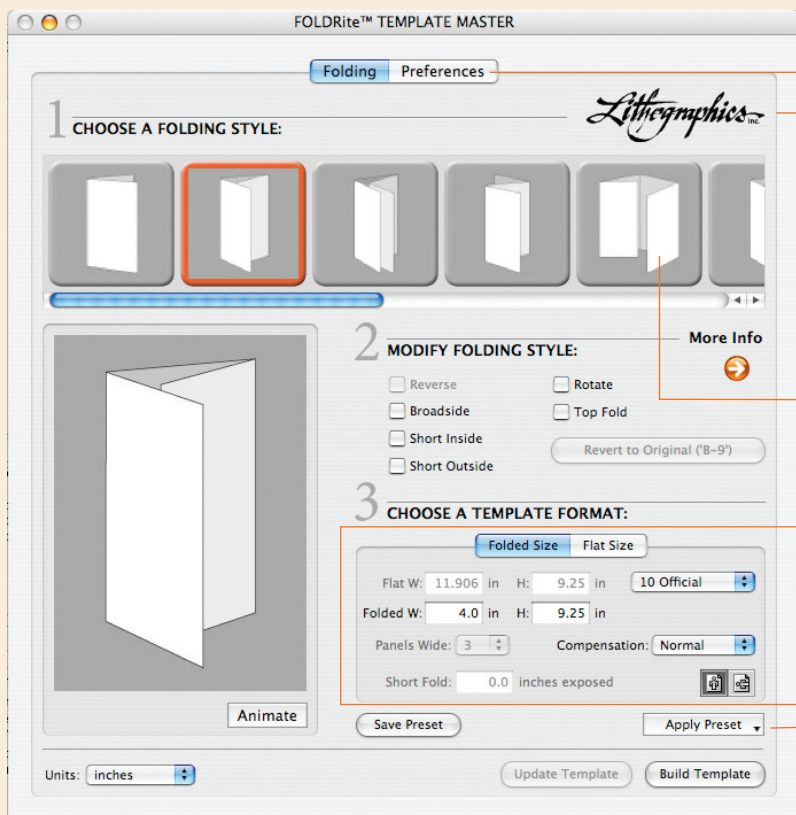

FOLDRite templates are ready-to-use, with fold marks and guides on locked layers, and panel cues in the slug area. Your client can simply start designing, with the confidence that their file is production-perfect.

The Benefits of Customization:

- Simple to install and use
- Swift ROI
- Branded UI reinforces top-of-mind positioning
- A standardized file submission process supports automation initiatives
- Strengthen client relations by providing useful tools that improve results, save them time, and give them the options they want

Our process

Every customization is exactly that—custom. We begin with an on-site visit where a FOLDRite specialist would travel to your facility for research and data gathering, and to facilitate discussions surrounding all details and features to support the development of a functional specification. Once the functional specification has been agreed upon, a technical specification is generated. Software development follows, and the implementation and testing phase completes the process.

LEVEL 1 CUSTOMIZATION PACKAGE INCLUDES:

- Choice of plug-in or Web-based format
- Option to set basic file preferences to suit your workflow.*
- Branded User Interface
- Option to edit folding style offerings to suit the capabilities of your operation.*
- Ability to set parameters/limitations on document sizes/formats to suit specific output devices
- Option to preload presets of optimal folding styles/sizes.

*Some restrictions apply.

Need a truly specialized folding solution? *Your search is over.*

Maybe your business is focused on direct mail, and you need the flexibility to modify and customize folding styles to suit postal regulations. Maybe you're exclusively working with digital print or a JDF workflow and you need to streamline the production process. Whatever your work environment, we can tailor a software solution for you, saving countless man hours and reducing error by automating manual tasks.

The Level 2 customization includes many of the Level 1 customization amenities such as a branded user interface, preloaded presets, and the ability to set parameters to suit specific output devices. The difference, however, is in the templates themselves. The Level 2 customization package offers specialized modifications such as BRC panels, custom guides/safe zones, die-perf tools, expanded features, and more. Choose from the Direct Mail, Digital Print or JDF feature package for a solution that fits your business.

Feature Packages

Direct Mail Package

- Ability to add or shorten panels
- BRC builder
- Die/perf tool

Digital Print Package

- Compatibility with Variable Data software

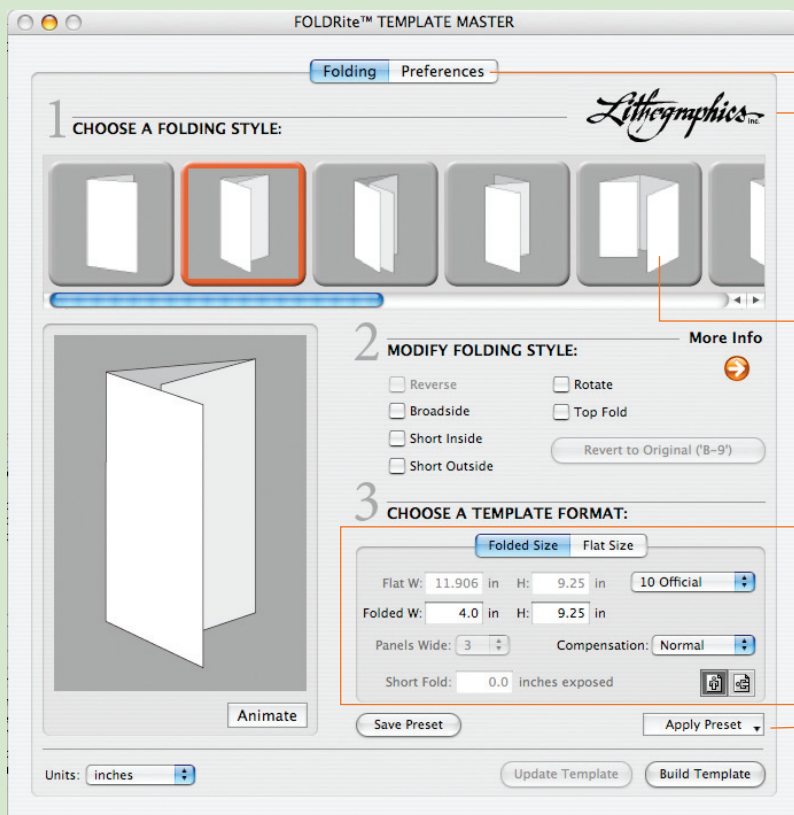

- Ability to categorize presets by client or subject
- Digital-specific settings

JDF Package

- JDF compliant templates
- Web-based JDF file submission upload portal

Our process

We begin with an on-site visit where a FOLDRite specialist would travel to your facility to research all details and features to support the development of a functional specification. Once the functional specification has been agreed upon, a technical specification is generated. Software development follows, and the implementation and testing phase completes the process.

LEVEL 2 CUSTOMIZATION PACKAGE INCLUDES:

- Choice of plug-in or Web-based format
- Option to set basic file preferences to suit your workflow.*
- Branded User Interface
- Ability to fully customize folding offerings and to add specialized features such as BRC panels, custom guides and safe zones, die/perf tools, and more.*
- Ability to set parameters/limitations on document sizes/formats to suit specific output devices
- Choice of Direct Mail, Digital Print, or JDF feature Package
- Option to preload presets of optimal folding styles/sizes.

*Some restrictions apply.

Looking for “lights-out” automation? *We can make it happen.*

In an environment where everyone is looking for faster turnaround times, Web-to-print, print-on-demand and automated processes, it takes a pretty powerful software solution to fill the order. Lucky for you, we can handle it.

Our premium customization package builds on the Level 2 customization package, so you'll get the benefit of fully customized folding modifications with a Digital Print or Direct Mail focus, however a Level 3 customization offers a host of exciting technology upgrades. Choose from Web-to-print integration with online layout through an InDesign Server hosted application, Adobe Flex integration, JDF compliant templates with a JDF file submission portal built to work with your MIS system, and additional integrated production tools. Our skilled team of software engineers can provide a specialized solution that will take your user experience and production workflow to the next level (and then some).

Feature Packages

Direct Mail Package

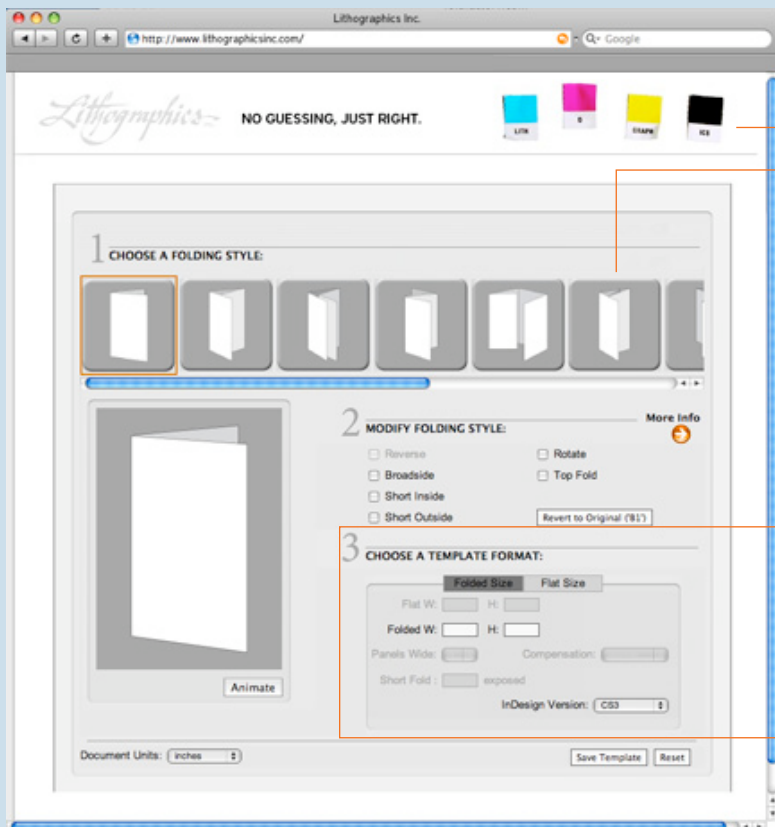

- Ability to add or shorten panels
- Business Reply Card (BRC) builder
- Die/perf tool

Digital Print Package

- Compatibility with Variable Data software
- Ability to categorize presets by client or subject
- Digital-specific settings

Our process
